Portable. Compact. Ergonomic

Imitating the Leaning Tower of Pisa, the unique 10-degree lopsided contour lends an artistic and ergonomic touch to the shape of the Mini-S. This smart and compact outline offers a comfortable handholding experience and eliminates worry of your grip slipping.

Filming made Quick and Simple

Once the smartphone is mounted on the Mini-S, the no-tool adjustment algorithm can quickly set up the gimbal and balance the 3-axis head without much intervention, saving you time and effort for filmmaking activities.

Many features packed into the Mini-S smartphone gimbal include one-button zoom, focus control and quick look-back (playback) to facilitate and simplify the operations even further.

Using the handle to control your phone's camera and being able to switch from landscape to vertical mode for live streaming adds to the smooth, simple operation and design of the Mini-S.
